

PRESS RELEASE

profine and Delta Dore presented convincing smart home solutions at Fensterbau Frontale 2024

At this year's Fensterbau Frontale, the joint offering from profine and Delta Dore in the area of smart-home generated huge interest among visitors.

In the course of their strategic partnership, the system provider profine and the French Delta Dore Group, Europe's expert for smart-home solutions, presented joint exhibits with various smart-home scenarios at their exhibition stands.

The focus of the partnership is the issue of security around windows and doors. The companies therefore emphasized on presenting a range of products that make homes safer, more comfortable and smarter.

This included the "MDO BL Tyxal+" wireless micro opening detector from Delta Dore, the completely radio-based alarm system including an outdoor siren and surveillance camera, as well as remote access via smartphone. The entire building can so be controlled, monitored and secured even from the holiday destination.

A live scenario of an attempted burglary impressively demonstrated the effectiveness of these solutions: When a break-in through a window was attempted, the resident was warned early and very effectively, visually, acoustically and by means of a push message.

Security and energy efficiency

In the future, the system provider profine will market the Delta Dore Group's products, which not only offer security but also increased energy efficiency and are particularly easy to use, to its customers in the "Smart Products" range of its Kömmerling brand. In order to meet the different requirements of window specialist companies, profine offers needs-based packages from "Smart Basic" to "Security Professional".

The products' easy installation, configuration and operation as well as the intuitive Delta Dore app enable users to monitor and control their home at any time and from anywhere.

Ralf Wagner, project manager at profine, emphasizes the importance of user-friendliness, especially for customers who are dealing with smart-home technologies for the first time. "We would like to encourage everyone to take their first steps into the world of smart-home and transform their home into a connected and secure environment. With our products we want to simplify everyday life and at the same time increase safety."
